1.1 Get Highest Values from Groups

There is a dataframe with a grouping variable. Get N rows that have the highest sorted value for another numeric variable. In the example below, group by *cyl* and get the cars with the lowest *mpg* in each *cyl* group.

Show all values.

```
kable(mtcars %>% arrange(cyl, mpg)) %>% kable_styling_fc()
```

Three groups min mpg each group:

```
# use mtcars: slice_head gets the lowest sorted value
df_groupby_top_mpg <- mtcars %>%
  arrange(cyl, mpg) %>%
  group_by(cyl) %>%
  slice_head(n=1) %>%
  select(cyl, mpg)

# display
kable(df_groupby_top_mpg) %>% kable_styling_fc()
```
